FOR IMMEDIATE RELEASE**Superlift Releases 4" & 6" Lift Systems For The 2006 Dodge MegaCab**

West Monroe, LA – Superlift is MegaCab-crazy with two new suspension systems for these 3/4- and 1-ton Rams. Common components in the 4" and 6" lift kits include engine-specific front coils (not spacers) for Hemi and Cummins/V-10 applications, polyurethane compression travel stops, replacement upper and lower trailing arms to maintain alignment specifications and handling, a dropped pitman arm to keep steering linkage geometry within spec, a track bar bracket, front swaybar extensions, a transmission drop bracket (6" kit only) and Superide shock absorbers at all four corners. The rear is leveled with tapered blocks.

These Superlift MegaCab systems are designed to accept factory-offset wheels. The 4" kit fits 35" tires, and the 6" system (shown) clears 37s.

Rockrunner upper and lower trailing links are optional. Their internal swivel system frees up more suspension travel while allowing a greater degree of caster adjustment than Heim ends. Front and rear multi-shock mounts are available, as are a choice of upgraded SS (by Bilstein) monotube shocks or SSR remote-reservoir monotubes.

Other options are carrier-bearing shims for Rams that have two-piece rear driveshafts, a transfer-case indexing ring (6" kit), a dual steering-stabilizer kit, the TruSpeed speed-sensor recalibrator, Torque Max Traction Bars, Bulletproof braided-steel/Kevlar-lined brake hoses and extreme Ring diff-cover protectors. Superlift backs all its products with a limited lifetime warranty.
